

1. Basic Lambda Setup

Create a Lambda function that returns:

```
"Hello from AWS Lambda"
```

Call it using a test event from AWS console.

Exercise:

- Create the function
 - Choose Python runtime
 - Test it from AWS console
-

2. Lambda with Input Event

Create a Lambda that takes:

```
{  
  "name": "Abdullah"  
}
```

and returns:

```
Hello Abdullah
```

3. Lambda as Calculator

Create a Lambda that accepts:

```
{  
  "a": 10,  
  "b": 5,  
  "operation": "add"  
}
```

Operations:

- add
- subtract
- multiply
- divide

Return result.

4. Lambda + API Gateway

Expose a Lambda as HTTP API.

Access:

```
https://api.example.com/hello
```

Return:

```
Lambda API Working
```

5. Lambda Logging

Inside Lambda:

- Print event
- Print timestamp
- Use CloudWatch logs

Exercise:

- Trigger Lambda
 - Open CloudWatch logs
 - Verify logs
-

6. Lambda with Environment Variables

Store:

```
APP_NAME = MyLambdaApp
```

Return it in response.

7. Lambda + S3 Trigger

Upload a file to S3 bucket.

Lambda should:

- Print file name
 - Print file size
-
